

Lampholder Lighting Design

COMMISSIONING CERTIFICATE ALL SAINTS' CHURCH, ELTON

Lighting installation	interior and exterior
Design	Lampholder Lighting Design
Installation	MV Installations Electrical Ltd

We confirm that lighting has been professionally installed according to the Specification. Glare has been controlled as far as practicable. We are satisfied that this lighting scheme has been properly commissioned.

The light fittings with integral LED have a service life of 50,000 hours [type V is 40,000 hours]. Where replaceable GU10 LED lamps are used (types G, H, N) the service life is 10,000 hours. Lighting usage will be under 1000 hours per year, hence these lights will run for decades.

Most of the lights have a 5-year guarantee, apart from: types C and W – 3 years; types L and N – 1 year. Should a fault occur during the guarantee period, MV Installations Electrical Ltd will investigate and arrange for repair/replacement as appropriate.

This operations & maintenance (O&M) manual is designed to provide information for present and future users and electricians, hence we recommend that it be kept in the vestry for reference.
